

MOVE OVER

The End of Road Rage!

Synopsis

Move Over Slow Drivers® (MOSD®) is an automotive cell phone app that identifies, monitors and reports slow drivers when they block fast highway lanes. Slow driving in the fast lane is one of the largest causes of highway accidents and road deaths.

Laws on Slow Drivers ... Blocking Fast Lanes

Every state has laws, requiring slow drivers to move over to the right and not impede faster vehicle traffic. Despite the laws, many slow drivers refuse to move over and then problems begin.

In reaction to being blocked by slow drivers, faster drivers often resort to "tailgating" or impulsive "in and out" lane switching to get past the slow drivers. Unfortunately, these ill-advised remedies can result in road rage, accidents, injuries or deaths.

Goal of MOSD

It is the mission and goal of MOSD to provide all drivers with the opportunity to do more than just complain, yell, tailgate, or express road rage, regarding the problem of slow drivers blocking fast lanes.

How it Works

The MOSD app works "hands free" with a simple voice control. The app videos the offending driver's license plate, date, speed, GPS coordinates and the actual passing of the slow driver (without their knowledge). The data is automatically forwarded to a clearinghouse. After review, the clearinghouse will only send Law Enforcement the video, if they believe there has been an infraction. It will be up to Law Enforcement to decide how to proceed.

Future of MOSD

In the future the MOSD App can be used to film drunk drivers, school bus violations, and many other infractions.

NOTE: There are never any setup costs for the authorities.
